EDUCATION

Jordan University of Science and Technology

Bachelor of Engineering in Network Engineering — GPA: 3.64/4.0

- Dean's List, 2023–2024

Irbid, Jordan

Graduated

EXPERIENCE

Jordan Open Source Association (JOSA)

Open Source Developer — OpenLab Apprentice

- Optimized Woodpecker CI's YAML schema validation in Go by compiling the schema once with sync.Once; reduced CPU profile duration by 86.2% across 20 runs of the same test workload (merged PR #7002).
- Audited Meshery dependencies and proposed updates addressing 6 Go advisories and 7 npm vulnerabilities; npm audit findings fell from 17 to 10 on the PR branch (PR #20779, under review).
- Designed per-workflow cancellation for Woodpecker CI across its API, scheduler, data store, frontend, and tests, preserving independent workflows (PR #7165, under review).

Amman, Jordan

May 2026 – Present

8BillionMinds

Software Engineering Volunteer

- Corrected a hardcoded SQL query in the Java 8 and Spring notification system, restoring delivery to students while teacher notifications continued to work.
- Developed Java 8 and Spring components for the platform's notification and email system.

Tadworth, United Kingdom

Feb 2026 – May 2026

42Irbid

Software Engineering Apprentice

- Reimplemented C library functions, including printf and line-oriented input, with attention to memory management and error handling.
- Built Push_Swap in C with linked-list stacks and selection, chunk, and radix strategies; benchmarked operation counts for inputs of up to 500 integers.
- Developing a seedable Python maze generator using Sidewinder and Union-Find, with perfect and imperfect maze modes and terminal rendering.

Irbid, Jordan

Jun 2025 – Present

MADAR

Software Engineering Intern

- Built 2 microservices for authentication and email using TypeScript, Node.js, and Express; used Kafka to process email and log events asynchronously.
- Implemented GraphQL-based real-time messaging updates so clients could request the specific fields they needed.

Amman, Jordan

Jul 2025 – Sep 2025

PROJECTS

Push_Swap

- Implemented two-stack sorting in C with selection, chunk, and radix strategies; used linked lists and operation-count benchmarking to compare algorithms on different input sizes.

SumHub

- Built a research-paper discovery application using MongoDB Atlas for document storage, Gemini embeddings, and Pinecone for semantic search; won Best Use of MongoDB Atlas at HackThisFall 2024.

Inception

- Built a three-container WordPress stack with a single TLS entry point, private service network, health-gated startup, file-based secrets, and persistent MariaDB and WordPress volumes.

TECHNICAL SKILLS

Languages: C, C++, Java, Go, JavaScript, TypeScript, Python, SQL, Bash

Frameworks: Spring, Hibernate, React.js, Next.js, Node.js, Express, Tailwind CSS, Material UI

Tools: Docker, Docker Compose, Kubernetes, Kafka, NGINX, Git, GitHub Actions, Woodpecker CI, Linux, AWS, MongoDB Atlas, Gemini API, IOTA, Pandoc

Concepts: Distributed Systems, CI/CD, Networking, Microservices, Asynchronous Messaging, Systems Programming, Concurrency, Performance Profiling, Cryptography, Blockchain, System Design

AWARDS & ACHIEVEMENTS

- **Top 20** — National CTF Competition (NCSC)
- **Winner** — **Best Use of MongoDB Atlas** — HackThisFall 2024

CERTIFICATIONS & LANGUAGES

Languages: Arabic (Native) , English (Professional Proficiency)
